TECHNOLOGY DEGREE APPRENTICE

J.P.Morgan

WHICH APPRENTICESHIP ARE YOU DOING?

BSc (Hons) Digital & Technology Solutions Degree Apprenticeship.

WHAT LEVEL IS YOUR APPRENTICESHIP?

Degree (level 6).

WHAT DO YOU DO?

I am a third-year degree apprentice at JP Morgan working within Cybersecurity and Technology Controls (CTC). As part of the rotational apprenticeship, I have worked in three different teams. I started working in the CTC Service Desk, then moved into the CTC Education and Awareness team and currently, I am working within the Cloud Product Security - Control Analytics team. These three teams have allowed me to develop and grow a variety of skills and build on my communication with colleagues across the globe. My current role involves identifying and communicating risks within the cloud platforms to ensure that the firms' products are secure on the cloud.

WHAT IS THE MOST EXCITING PROJECT YOU HAVE WORKED ON?

The most exciting project I have worked on has been creating and delivering multiple in-person autism friendly escape room challenges and hosting a Cyber Career Advice session to students, educating and providing insights on Cybersecurity during Cyber Awareness Month. This project was during my rotation in the Education and Awareness team and I was given the lead on this which allowed me to develop my communication with various stakeholders and build on my public speaking skills. This project involved me reading several resources and undertaking Autism Awareness training to allow me to make technology as a subject more accessible to members of the autistic community.

WHAT IS YOUR PROUDEST APPRENTICESHIP MOMENT?

My proudest moment of my apprenticeship so far was at the JP Morgan Bournemouth Technology Awards in 2022 where I was awarded Rising Star. In addition, I was nominated for the Community and Culture Champion for keeping the community connected and improving the tech centre culture. This has allowed me to continue expanding my professional network and build my personal brand.

WHICH FEMALE INSPIRES YOU AND WHY?

My inspiration is a former colleague/mentor who demonstrated her courage, resilience and motivation through her journey into technology. Relocating to another country, completing her Masters degree and being an advocate for women in technology has truly inspired me to take on new challenges and embrace change.

"DON'T BE AFRAID TO TAKE A RISK AND TRY SOMETHING NEW AS THE TECH INDUSTRY IS ALL ABOUT CREATIVITY AND INNOVATION."
